Write a Servlet to demonstrate the difference between HTTP GET and POST methods by creating a form and handling requests accordingly.

AIM

To create a Java Servlet that demonstrates the difference between HTTP GET and POST methods by handling form data.

ALGORITHM

1. Create a Dynamic Web Project.
2. Configure Apache Tomcat Server.
3. Create an HTML form with both GET and POST methods.
4. Develop a Servlet to handle both requests:
5. `doGet()` for GET method
6. `doPost()` for POST method
7. Deploy and run the project.
8. Observe differences in output and URL.

SOURCE CODE

User Interface (index.html)

HTML

```
<!DOCTYPE html>
<html>
<head>
    <title>GET vs POST Demo</title>
</head>
<body>
    <h2>HTTP GET Method</h2>
    <form action="MethodServlet" method="get">
        Name: <input type="text" name="username"><br><br>
        <input type="submit" value="Submit using GET">
    </form>

    <h2>HTTP POST Method</h2>
    <form action="MethodServlet" method="post">
        Name: <input type="text" name="username"><br><br>
        <input type="submit" value="Submit using POST">
    </form>
</body>
</html>
```

Controller Servlet (LoginServlet.java)

```
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;

public class MethodServlet extends HttpServlet {

   // Handles GET request
   protected void doGet(HttpServletRequest request, HttpServletResponse response)
         throws ServletException, IOException {

      response.setContentType("text/html");
      PrintWriter out = response.getWriter();

      String name = request.getParameter("username");

      out.println("<html><body>");
      out.println("<h2>GET Method Used</h2>");
      out.println("<p>Name: " + name + "</p>");
      out.println("<p>Data is visible in URL</p>");
      out.println("</body></html>");
   }

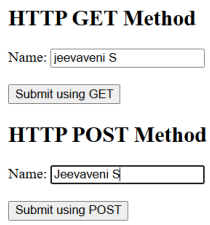
   // Handles POST request
   protected void doPost(HttpServletRequest request, HttpServletResponse response)
         throws ServletException, IOException {

      response.setContentType("text/html");
      PrintWriter out = response.getWriter();

      String name = request.getParameter("username");

      out.println("<html><body>");
      out.println("<h2>POST Method Used</h2>");
      out.println("<p>Name: " + name + "</p>");
      out.println("<p>Data is NOT visible in URL</p>");
      out.println("</body></html>");
   }
}
```

OUTPUT:



RESULT

The Servlet successfully demonstrates the difference between HTTP GET and POST methods.
